Folder Lock: Password protect your files, folders, drives, USB/external drives and CD/DVDs.

NewSoftwares.net, Inc. today announced the major upgrade release of one of the most downloaded data security programs: 'Folder Lock'. What's so special about Version 6.1.2? It's a hassle free and user friendly way to create portable, undeletable and encrypted Lockers. Keep your important data in the Lockers and never worry about data theft, breaches of privacy, data leaks, data backups and data losses ever.

Whether you keep private information in the Windows Documents folder, or keep files that are personal to you, or files with valuable information that can be stolen or lost, Folder Lock secures your data in one fell swoop. With military level encryption and kernel level locking and with additional features like hack monitoring, stealth mode, data shredding, auto protection, portable USB autoplay feature and virtual keyboard, Folder Lock can enhance data security of your files beyond anything ever achieved. In addition, a locker's delete, move and rename are password protected to prevent data loss.

Just as Lockers in the physical world, each user can create their own Lockers. A single user can create multiple Lockers with different passwords as well. These Lockers are special, you can even increase their size to add more data in it, or move them to a USB drive or CD/DVD. Furthermore, if you choose the autoplay in portable drive feature, you don't need to install Folder Lock in another computer, where you require to decrypt your data.

But wait! Encryption isn't the only feature this program offers, you can also lock and hide your files, folders and even drives on your computer with Folder Lock. Each Locker can represent a different user, which means each user can lock their own personal items with different passwords and Folder Lock will keep their profile and encrypted data separately and protected with different passwords. Folder Lock is priced at \$39.95 (US) for a single user license and may be purchased online at <http://www.newsoftwares.net/folderlock>

Multi-user licenses, site licenses, and academic licenses are also available. You can download a fully functional evaluation copy from www.newsoftwares.net/folderlock For more information please contact us at steve.frank@newsoftwares.net
