Website revamped & Folder Lock's latest version is OUT

NewSoftwares.net, Inc. today announced the major upgrade release of our all time favorite password protection and encryption software 'Folder Lock'.

What's so special about Version 6.0? The new version of Folder Lock comes with a totally new GUI design, an improved encryption algorithm and an enhanced, easy-to-use interface.

Folder Lock now creates encrypted and password protect storage files called 'Lockers'. You can treat Lockers just as you treat them in physical world.

You can keep your private and confidential files and folders, in these Lockers and protect them from intruders, hackers, co-workers or family users.

Lockers are portable, so you can also copy them in your USB device or a CD / DVD (R-RW). Lockers are transferable and can also be sent to a friend or co-workers through email. Furthermore, Lockers are undeletable on the computer where Folder Lock is installed, preventing data loss and theft.

The program uses 256-bit on-the-fly AES encryption, one of the strongest algorithms. The secret to Folder Lock's fast encryption is that it doesn't decrypt all the files but only files that you access. This helps Folder Lock to carry out fast encryption and decryption procedures.

Folder Lock can also lock your files, folders and drives. If you do not prefer to move your files to Lockers, you can simply lock them for your convenience.

With additional options like stealth mode, hack attempt monitoring, history cleaning, data shredding and auto protection, Folder Lock stands out the crowd and is highly recommended.

Folder Lock is priced at \$39.95 (US) for a single user license and may be purchased online at www.newsoftwares.net/folderlock Multi-user licenses, site license and academic licenses are also available. You can download a fully functional evaluation copy from www.newsoftwares.net/folderlock For more information please contact us at steve.frank@newsoftwares.net
