Kiss Your Privacy Worries Goodbye with Folder Lock!

A slim security tool lets you password-protect files, folders, drives and removable disks in seconds and protect sensitive information in Safe Mode and even in real DOS Mode

NewSoftwares.net, Inc. today announces the release of version 6.0 of Folder Lock, a fully-fledged security tool for the Windows OS. Folder Lock gives you a pain-free ability to lock, hide, encrypt and password-protect files, folders and drives on your PC. Also, you can protect files on USB flash drives, memory sticks, CD-RW, floppies, and notebooks.

"You can work with Folder Lock in much the same way as you would with a locker in the physical world," says Steve Frank, manager at NewSoftwares.net. "Just like it is with a real safe or a locker, you have a encrypted and password protected storage file called Locker, where you can keep any number of private files and folders. This may be your passwords, credit card numbers, software source code, images and anything else that needs to be protected. Once the Locker is locked up, all files inside become inaccessible for unauthorized users, be they your spouse, co-workers, cyber-hackers or computer viruses. The program uses 256-bit on-the-fly AES encryption, which is the strongest today."

Mr. Frank further says, "The Locker eliminates the hassle of having to lock up or encrypt each file separately. Another good thing about Folder Lock is that it locks files even on portable devices. Copy the Locker file to the USB device, CD-DVD or even email it to a co-worker. Simple."

"As for the files and folders that are located outside the Locker folder, you can lock them too," continues Mr. Frank. "Simply right-click the file you want to protect, select the "Lock Folder" item from its context menu, enter a password, and voila! Your file is locked. Now, it cannot be deleted, renamed, accessed, and even seen, and if you activate Stealth Mode, the program itself will get hidden and will only run if the hotkey is pressed.

What tricks does Folder Lock let you play on hackers?

1. Expose the hacker before he exposes you

Folder Lock has a Hack Attempt Monitoring feature that records a log of all invalid passwords used with respect to their time and date. You can learn who tried to access your personal files in your absence by providing different passwords. You can also set the program to lock or shutdown your PC if more than five invalid passwords have been entered.

2. Use stealth, become invisible

Folder Lock has a Stealth Mode to hide Folder Lock from the eyes of curious people. Once this mode is on, all links, shortcuts and traces of Folder Lock in Desktop, Start Menu, Control Panel, Program Files folder and the context menu of Windows Explorer disappear completely. This can help you make your private information totally protected from intruders as they are simply not aware of its existence. To run the program under Stealth Mode, you should press the combination of CTRL+ALT+SHIFT+Your Key.

3. Auto-Protect

Folder Lock lets you lock and encrypt your files after a certain period of time. You can choose the idle time and the program will automatically protect your files. This is a useful feature for those who forget to protect their Lockers and move away from their computer for longer periods of time.

Pricing and Availability

Folder Lock 6.0 runs under Windows Vista/2003/XP/2000 and costs \$39.95 (US) for a single-user license. Licensed customers are entitled to upgrade of all 6.x versions and technical support. Additionally, customers will get bonus gifts worth \$29.95. Multi-user licenses, site license and academic licenses are also available. Additional information on Folder Lock, as well as its evaluation version, which is restricted to 30 runs is available from <http://www.newsoftwares.net/folderlock>.

About NewSoftwares.net

NewSoftwares.net is a privately-held technology company that specializes in utility software for Microsoft Windows. NewSoftwares.net consistently receives top ratings and recommendation by respected product reviewers from PC Magazine, PC World, Wall Street Journal USA, seen on TV in TechTV Call for help, BBC Click Online.

In addition to Folder Lock, the company also offers History Clean, a Windows tool that removes cookies, cleans cache, and removes all traces of internet activities, and Macro Buddy, a four-in-one program that automates repeated typing tasks to increase computational productivity.
