Folder Lock Protects The Data That Matters Most!

Beaverton, Oregon (November, 2009) - NewSoftwares.net announces the release of Folder Lock 6.3.1, a security program for the Windows operating system. Folder Lock protects files and folders on your PC, removable USB Flash drives, CDs, DVDs, and floppies. Folder Lock keeps data on your PC or laptop safe and secure at all times.

Folder Lock is an award-winning security tool that's intuitive and easy-to-use. With just a few keystrokes you can lock, hide, and encrypt the files that matter most to you. While easy-to-use, Folder Lock packs a lot of power under the hood with 256-bit Blowfish Encryption. It's fast, safe, easy, and secure.

Folder Lock can also be used to shred sensitive files so they can't be recovered. Files protected on removable media can be moved from one computer to another without having to install software. Folder Lock also features a Stealth Mode, Auto Protect, and Lock PC.

New features in this version of Folder Lock include numerous improvements to the user interface. Many settings have been rearranged and tweaked so they are now easier to implement. Users now have the ability to pick the default drive letter and choose a default location for lockers. These and other improvements make Folder Lock even easier and faster to use than before.

System requirements

Folder Lock will run under Windows 2000, XP, 2003, Vista, and Windows 7. It requires 4MB of RAM and 5.0MB of free hard disk space.

Availability

Folder Lock is available for \$39.95 US from the NewSoftware.net Web site at <http://www.newsoftwares.net>. A fully functional evaluation version is also available from the Web site. Educational, academic, and multi-user licenses are available.
